I am an Orlando Native. "Born and Raised" in Orlando. In 1971 Disney World opened for business and Orlando had about 60,000 residents. Disney now employs well over 60,000 people, and in 2010 the Greater Orlando area had over 2.1 Million residents. To say the least Orlando has changed. Orlando is going to continue to grow and change. Change is good for the construction industry in terms of a need for new buildings, roads, and infrastructure. We are seeing the beginnings of a major change in the Orlando landscape due to the I-4 Ultimate Project. There are changes occurring all around us every day. We as Estimators, Pre-Construction Managers, Business Owners, Sales Professionals, and Construction Managers will see more changes coming soon. Your Chapter 22 Board of Directors will try to highlight, discuss, and help present some programs that will perhaps prepare you for some of the coming changes. I am excited about being your President and on behalf of the new incoming board we will pledge to bring you some great programs, and events!

PCEA President 2015-2016
Scott Coleman
 Tri-City Electrical

PCEA would like to thank all our sponsors for supporting us throughout the year.

I-4 Ultimate

The I-4 Ultimate project is an award winner! I-4 Ultimate was recently honored by IJGlobal (Infrastructure Journal and Project Finance Magazine) as the "Deal of the Year" in the Transport category. The Americas Awards recognize innovation in financing and infrastructure, as well as the leading firms and institutions in the market.

What helped I-4 Ultimate take home the top prize? It is the largest availability-based public-private partnership (P3) in the United States to date and the largest transportation project in Florida history. The project received the largest Transportation Infrastructure Finance and Innovation Act (TIFIA) loan on an availability-based P3 project to date and the third largest ever. In addition, I-4 Ultimate was the first bank deal in the United States P3 market since 2010.

"The Deal of the Year award recognizes our team's ability to innovate in project finance," said Cesar Souza, chief executive officer of I-4 Mobility Partners. "It is also the result of a successful partnership between Skanska and John Laing; this project represents the eighth public-private partnership transaction between the two firms and the first in North America."

The team proudly accepted the award at the Americas Awards ceremony, which was held in New York City. More than 550 market professionals attended the ceremony.

Work Begins at Maitland Interchange

The extensive revamping of the Maitland interchange on Interstate 4 (I-4) has begun, as construction crews work to remove the large dirt mound on the eastbound side of the highway.

The gently rising hill, known humorously as Mount Maitland, had been built years earli-

er to reinforce the spot after a huge, ancient sinkhole was found during an earlier improvement project. In order to stabilize the area, the construction team pumped grout into the sinkhole. The strong supportive material eventually filled an underground area that was as large as a football field and the equivalent, top to bottom, to the SunTrust Center office tower.

With the ground now stabilized, the mound on top is no longer needed, and its removal signals one of the first highly visible starting points for the I-4 Ultimate project. By the end of the project, commuters should see great improvement in traffic flow around the interchange, as well as a beautiful, curving pedestrian bridge over I-4 that increases safety and visual appeal.

The effort to revamp a 21-mile section of the

interstate to address the current and future needs of Central Florida is expected to take six and a half years. However, there are incentives to have the Maitland portion of the project finished in three years.

The dirt from the mound is being piled in a nearby open field. As construction on I-4 Ultimate continues, that excavated dirt will be used to build up the base of the new roadway.
